

## Class Review / suggestions

I feel as though you have done a very good job of teaching this class. Chemistry has long been a struggle for me (I had to take Chem I twice), but you have taught in such a way that I have learned the ideas, enough to maybe even get my first A in a college (academic) class.

My only suggestions would be to use a different lab notebook - instead of the photo copied handouts. They are easy to transport, but are also easy to lose. Also, it would be nice to get tests back so that we can see what questions we messed up, and fix the problems, and also so that we can use them to study for the final exam.

I really enjoyed this class. I feel that you made it easy to learn this material. To be honest, I was dreading this class, but it was really painless! 😊

I know it's not under your control, but if the department could rearrange the labs so they're all contained in the packet, that would be helpful. Also, it would be helpful to make the directions more clear on the qualitative analysis labs - again a move by the department, not you individually.

Thank you again for all your help!  
Have a great summer!

I enjoyed this class I found the handouts helpful along with reviewing problems during class time instead of having problems assigned for homework. The material was presented in an easy to understand manner with good visual aids and demonstration from the professor. The chapter outlines handed out @ the beginning of each chapter made it easier for me to follow along and pay more attention during the lecture instead of copying down notes.

6/27/06

I usually had a good turn out for the study group before class - about six was the average. About half used the time as their only review and the other half used it to clarify any questions they had about the work they did outside of class.

I stopped doing review handouts because I found that when they worked together in group, they understood the material better.

~~Thought I should say~~  
~~and~~

I have enjoyed working with you, Dr. Sab, and wish you the best in the future. If you are still around Wayne State in the fall, I may run into you.

Miranda Webster

I liked class you were very sweet  
and helpful 😊

I really liked this class. I thought you were a great teacher because you enjoyed what you were talking about. I really liked that there weren't any surprises on the tests. What we went over in class was what we needed to know. Lab was good, ~~some~~ <sup>I didn't</sup> really like that we had to recopy the procedure. I never understood what the point of that was. Overall, this was a very helpful course and I am glad I took it.

(fluticasone propionate and salmeterol inhalation powder)

I think the class was well organized for any type of student.

The teacher was lecture at a steady pace which made the material easier & more understandable for the short period of time. Thanks A lot

- What I appreciated most was that the problems we cover in lecture were problems that we saw on the test. You prepared me well for the test.
- I was always a bit confused when reading the labs. Maybe a quick explanation before we started them would benefit your future classes.

Thanks so much !

## Comments.

I enjoyed this class & your lectures.

The exercises done in class were extremely helpful.  
and your tests were straight forward.

Lindsay Keber

I thought the class was good and fair. Practice problems a little repetitive, but a good help. Very helpful teacher. I enjoyed the class. Would be nice if she went over the tests after we took them.

I really enjoyed this class because it was a good pace for a summer course. It didn't go too fast or too slow, and I was still able to learn the material.

Notes are brief  
Tests are fair  
overheads are helpful

The only suggestion is to  
slow down both in speech  
and in outlining problems on  
the board.

Everything was good. One suggestion would be  
at times when things get repetitive in lectures more  
time was spent on that than newer, more difficult things  
other than that a good course.

1. What are the strengths of this laboratory course?

Students are able to apply their knowledge of chemistry to real life situations. The lab is well equipped with modern apparatus and the instructor is very experienced and knowledgeable.

2. What are the strengths of the laboratory instructor?

- Good teacher  
- Clear instructions  
- Well organized  
- Uses simple language  
- Patient

3. What are the weaknesses of this laboratory course?

- Lack of interaction between students  
- Some apparatus are old  
- Limited time for practical work  
- Limited number of students.

4. What are the weaknesses of the laboratory instructor?

In classroom lectures, it's good that you show graphs and pictures from other books than ours. That way maybe we can understand one better than another. It is also great that you try to relate the chemistry to subjects we are more familiar with.

In lab, I understand that it is important to let us ~~use~~ use material we have learned to do the lab, however, many of us are confused by directions, and were worried to do something very, very wrong.

Overall, it was a great experience being in your class. You are a great instructor. Please, for the benefit of future students, continue your teaching tactics.
