Regarding the manner of attribution:

(Note: This attribution information applies to folks who want to publish materials that either include my Physics by Saab materials within their own work, or represent a modification of my Physics by Saab materials. If you are simply using my Physics by Saab materials in your own class, you can print and copy them as is; you can modify them and print and copy the results for your students; and you can cut and paste pieces of them into your own handouts and print and copy the results for your students.)

Everybody has rights to use my *Physics by Saab* materials but nobody has *exclusive* rights to use them. The attribution requirement is in place to prevent someone from thinking that they do have *exclusive* rights to all or some fraction of the *Physics by Saab* materials.

If you use an excerpt from *Physics by Saab* in your own work, please write near the excerpt, on the same page as the excerpt, "online *Physics by Saab* by Nada Saab-Ismail."

If you use a lot of excerpts and you would prefer not to include an attribution near each excerpt, write, somewhere near the beginning or end of your work, a statement to the effect that you used a lot of excerpts from the online *Physics by Saab* by Nada Saab-Ismail.

If you modify *Physics by Saab* and release the result; for instance, if you rearrange the lessons, tweak the text to make the new arrangement more viable, and you change the notation to notation that you prefer; please release the resulting work as *Physics by Saab* by Nada Saab-Ismail as modified by [your name goes here]. If you are modifying a previously modified version of *Physics by Saab*, just add your name to the list of modifiers.

If you modify *Physics by Saab* to the extent that one portion of the resulting work includes at least five lessons from you and at least five lessons from *Physics by Saab*, list the two of us as co-authors for that portion.

If you want to use part or parts of *Physics by Saab* in a derivative work that you are willing to release under the same license governing *Physics by Saab* and the manner of attribution specified here appears to be unclear, overly onerous, or just not the way you would like to do it, please write me.
